GRAF
for a greener planet

for a greener planet

Climate change. Our world is currently facing huge challenges. In these times, good examples are needed. Or rather: initiators that are not only preaching sustainability, but put it into practice. Just as we at GRAF are already making an important contribution. After all, it is not only our solutions for rainwater management and other applications related to our water that are thoroughly suistainable, but also the plastic we use to make our products.

For example, we turn short-lived food packaging into EcoBloc infiltration modules, with a lifespan that spans generations. In this way, we can make our cities a little safer against increasing heavy rainfalls. Or rainwater tanks allow us to water our gardens with a clear conscience even during hot spells. Along the way, recycling saves us about 100,000 tonnes of CO_2 every year, which is almost as much as the emissions of over 60,000 cars.

By the way, we recycle our products ourselves. Our raw materials competence centre makes us unique. It is our heart and soul, containing not only all of our innovative power, but also our lifeblood. For a better world for us all - for a greener planet.

This is us

The whole world is talking about sustainability. For us, it has long been an integral part of our very identity. We recognised the potential of rainwater early on: "Rainwater is free" was one of our first campaigns back in the 1970s. GRAF water butts have been manufactured in our family business since 1974. Only four years later, the first underground tanks for rainwater harvesting followed. GRAF water butts have been made from recycled material since 1980. The Green Dot was still a long way off back then. Rainwater is still free of charge, by the way. But in times of climate change, drought and heavy rainfall, sustainable water management is much more than that: it is a valuable contribution to our future.

This is what we stand for

75% recycled content

Environmental products for SUSTAINABLE water management

Every year **100.000 T LESS CO$_2$** emissions trough recycling. This is equivalent to the CO$_2$ emissions of 60,000 cars

LONG SERVICE LIFE and spare parts supply

Recycled material **FREE FROM HARMFUL SUBSTANCES**

80% renewable energy share used in production

Products are **FULLY RECYCLABLE**

State-of-the-art production facilities for **LOW ENERGY CONSUMPTION**

Learn more

Rainwater harvesting is an active way to protect the environment!

This is how environmental protection begins

Rainwater harvesting is good for the environment. Collecting small amounts of rainwater already conserves our groundwater reserves and saves the costly treatment of drinking water and the associated CO_2 emissions.

Save money

Drinking water is an expensive commodity – far too precious to be used for watering plants. Rainwater harvesting is a real alternative here. GRAF offers stylish tanks for rainwater harvesting in the garden that are easy on the pocket and are also a visual pleasure.

Experts irrigate with rainwater

When it comes to watering plants, there is nothing better than rainwater. Clean, soft and at a pleasant temperature, it falls from the sky for free. This makes it clearly superior to cold and often hard tap and ground water. As a result, rainwater tanks are becoming a standard element in more and more gardens.

Special filters are used for the ideal connection to the downpipe, which, in addition to filtering the precious water, also prevents the tank from overflowing.

Stylish tanks for every taste

Choose your tank from over 90 shapes, colours and sizes

TIP
Online product advisor
www.graf.info/produktberater

This is GRAF quality

The integrated planter tray is easily removed and has a depth of 20 cm which allows forindividual design with all 2in1 rainwater storage tanks.

UV PROOF

The plastic tanks are protected from sunlight for a long life. Exposure to UV light is reduced to a minimum.

RECYCLING INSIDE

75% of all GRAF products are made from recycled raw materials. Some products even by 100%. The tank material is fully recyclable. Long-life product design is a top priority as early as during the product development phase. This ensures less environmental impact in the long run.

WEATHERPROOF

Rainwater tanks are exposed to the weather and large temperature differences. Materials adapted to these conditions assure the tank has long-lasting visual appeal.

CHILDPROOF

Due to the closed tank shape or an integrated cover, stylish tanks by GRAF are basically childproof.

THREADED CONNECTION

A standard 19 mm (¾") threaded connection ensures the easy installation of the outlet tap (accessory) without drilling. Water drawing becomes very easy with an outlet tap.

ASSEMBLY ACCESSORIES INCLUDED

Each tank is supplied with matching assembly accessories. This includes, for example, an inlet seal, a plant fleece for rainwater storage tanks that can be planted or wind protection for tanks for wall installation.

COMFORTABLE CONNECTION

Additional connection for water drawing with the Aqua-Go hose set (accessory) and for residual emptying before the frost period.
PURE NATURE!

The tank with its wavelike surface structure reveals new facets as the light changes throughout the day. This way, the Natura 2in1 rainwater storage tank sets lively accents on your terrace.

Connection made easy

DOWNPIPE FILTERS
>> from page 61

Downpipe filters reliably filter contaminants from rainwater and thus ensure the best water quality. Overflowing of the rain barrel is made impossible – thanks to the overflow stop. The excess water simply flows back into the rain pipe. In winter, the inflow to the rainwater tank is stopped with a flick of the switch.

Connection position can be chosen flexibly

STRUCTURE AND CONNECTION OF A RAINWATER STORAGE TANK

This video shows you how to easily set up an overground tank, what to observe and how to connect it to the downpipe.
VIDEO TIP
You can find the entire video at GRAF TV at **www.graf.info/v106**

OUTLET TAP
>> from page 66

Water drawing becomes very convenient thanks to the GRAF outlet tap (accessory). It is screwed into the standard threaded connection of the tank without drilling.

UNIVERSAL HOSE SET

>> from page 66

The universal hose set and the Aqua-Go hose set (accessories) offer an additional drawing option. They serve to utilise the full tank volume and as a fill level indicator. The universal hose set is either screwed into the comfortable connection of the tank or installed on the tank using a drill and a seal (both included in the scope of supply).
The Aqua-Go hose set can simply be screwed in if a threaded connection is available.

Rain collector

THE ASSEMBLY WORLD CHAMPIONS

Installed in 5 minutes
