Specifics	<ul style="list-style-type: none">• 21.6 m x 20 m x 1.82 m• 5 Layers• Installation depth 3.72 m

Housing Development in Salta Province, Argentina

In a remote area without sewer a church is built and all the rainwater collected needs to be effectively drained on the available land. The EcoBloc maxx is the right choice because of the type of traffic that will circulate above the tank (up to 40 Ton) and the installation of 3 Optimax XXL filters ensures adequate cleaning of the collected rainwater and completes an ideal and customized solution for this project.
