Project

Logistics Centre
Neuried (Germany)

Application

Light liquid separator for washing area

Category

Industry/Commercial

Product

Light liquid separators
Diamant System A

Storage capacity gross

2210 m³

Dimensions

245 x 115 x 109 cm

The GRAF Group's logistics centre has received an addition in the form of a light liquid separator for the forklift washing area, dimensioned and installed in compliance with the stringent internal ecological standards, the municipal wastewater statutes, the water resources laws WHG, and the wastewater regulations.

The GRAF light liquid separator Diamant System A featuring a coalescence unit has been officially

approved for the treatment of wastewater carrying mineral oils (rainwater, sewage, condensates). The washing areas clean the vehicles not only of visible soiling, but also of oils and greases.

The light liquid separator extracts these oil particles from the wastewater before it is routed into the sewer system.
