Schönau (Germany)

Application

Firefighting water storage

Category

Industry/Commercial

Product

Carat XXL firefighting water tank

Storage capacity gross

264 m³

Dimensions

Multi tank system

A fire safety inspection on an industrial estate in the Black Forest town of Schönau identified the necessity of additional facilities for providing 264 cubic metres of firefighting water. In response, the town council decided to commission the installation of four GRAF CARAT XXL underground tanks to provide this firefighting water on the industrial premises.

The Carat XXL firefighting water tank was pre-assembled at GRAF according

to the project specifications and delivered ready for connection with all accessories as specified in the standard DIN 14230. In addition to a holder for a sign indicating the extraction point, the scope of delivery includes two welded-in plastic suction pipes DN 125, a stainless steel strainer with anti-vortex plate, a firefighting water suction connection with a dipstick and an A-type solid fire hose coupling (110 mm diameter)
